Subject index

Apparatus
- for defect characterization 15
- for gallium nitride growth from atomic nitrogen 478
- for preparing aluminum nitride powder 487

Cellular growth
- of gallium arsenide 203
Compliant substrates issues
- direct bonding of silicon 107
Computer simulation; Monte Carlo method
- of device characterization 375
- of magnetohydrodynamic flows 788
- of metalorganic vapor phase epitaxy solidification of binary melts with mushy regions 797
- of molecular dynamics 54
- of radial segregation 573
- of point defect diffusion in silicon 49
- of solutal convection 767
Constitutional supercooling, of
- indium gallium arsenide 471
Convection 471, 532, 554, 704, 777, 788

Defect determination in
- aluminum gallium arsenide 242
- gallium arsenide 172
- gallium nitride 157
- separation by implanted oxygen 40
- silicon 31, 90, 116, 366, 370
- silicon on sapphire 102
Dendritic growth 777
Device characterization
- diodes 260, 305, 313, 323, 346, 375, 511
- electronic materials 36, 69, 74, 80, 107, 116, 157, 193, 198, 220, 247, 255, 268, 273, 283, 288, 292, 305, 318, 323, 341, 346, 351, 356, 361, 379, 384, 401, 416, 511
- heterojunctions 143, 331
- lasers 296, 307, 313
- quantum structures 182, 238, 421, 451
- solar cells 264
Diffusional control
- of copper in gallium arsenide 177
- of hydrogen in silicon 94, 122
- of metal in silicon 395
- of phosphorus in silicon 128
- of platinum in silicon 132
- of point defects 54
Dissolution, of
- defect nuclei 7
- metal precipitates in silicon 395
Diodes, see Device characterization

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
- chemical 36, 132, 167, 264, 346
- defect selective 151
- in situ dry 600
- photo 177

Heterojunctions, see Device characterization
Hydrodynamics, see Convection

Kinetics
- of defect annealing in zinc sulphide 278
- of growth 60, 421, 511, 596, 613, 704
- of interface control 351, 735
- of metal precipitates dissolution 395
- of nucleation 527, 719, 746
- of void defect formation 1

Lasers, see Device characterization
Lasers, crystals for
- acetoacetanilide 824
- barium erbium chloride 699
- barium sodium niobate 655
- Faraday isolator 663
- neodymium-doped calcium gallium oxoborate 815
Lysozyme 753

Melt growth techniques
- by accelerated crucible rotation technique
- of aluminum copper hypertectic alloys 777
- theory of dopant segregation 554
- by Bridgman–Stockbarger method
- - of aluminum copper alloys 637
- - of indium gallium arsenide 471

PII: S0022-0248(00)00299-2

– – of peritectic cadmium tin alloys 637
– – of silicon 541
– by Czochralski method
– – of gallium arsenide 203, 207, 260, 268
– – of hexafluoroaluminates of LiCa and LiSr 683
– – of indium phospide 226
– – of lithium niobate 670
– – of neodymium-doped calcium gadolinium yttrium garnet 815
– – of silicon 1, 7, 20, 26, 31, 45, 54, 60, 65, 532
– by floating zone method
– – of manganese galate 783
– – of manganese magnesium galate 783
– – of silicon 541
– – theory of oscillation onset 239
– by micro-pulling down method
– – of terbium–gallium garnet 663
– by zone melting
– – of rare earth yttria compounds 694
– theory of defect formation 60
Microgravity 471, 573, 819
Morphological stability, of
– gallium nitride surfaces 435
– peritectic alloys 637
– precipitates in silicon 65
– silicon carbide surfaces 613

New crystals
– acetoacetanilide 824
– barium erbium chloride 699
Nucleation
– of calcium carbonate 719
– of diamond 623
– of gallium nitride 143
– of oxide precipitates 7, 49
– of protein crystals 746
Numbers
– Grashof 767
– Peclet 573, 704
– Rayleigh 704
– Reynolds 767

Phase diagram
– of fluorides 683
– of strontium sulphor–gallium sulphor 677
Precursor, for
– magnesium oxide 651
– silicon carbide 629
– silicon on insulator exfoliation 94

Quantum structures, see Device characterization

Solution growth techniques
– by dialysis
– – of *E. coli* polyamine induced protein 761
– by flux
– – of diamond 388, 623
– – of potassium titanyl phosphate 704
– – of strontium gallium sulphor 677
– – of sulphospinel $CuIr_2S_4$ 772
– – of titanium-doped sodium vanadate 646
– by low temperature
– – of calcium carbonate 719
– – of calcium phosphate 735
– – of potassium dihydrogen phosphate 767
– – of proteins on the Shuttle 819
– – of subtitisin 746
– – of zinc tris(thiourea) sulphate 741
– by spray pyrolysis
– – of zinc oxide 516
Superconductivity materials, high T_c
– film
– – of BiSrCaCuO 587
Surface structure
– of aluminum arsenide 182
– of copper contamination in silicon 112
– of gallium arsenide 182
– of semiconductors 408
– of silicon on insulator wafers 98
– of silicon wafers 36
– of vicinal silicon 85
– of zinc selenide 230

Thin film formation
– by wafer bonding
– – of silicon 351
Thin film growth, epitaxy
– by contactactless physical vapor transport
– – of cadmium telluride 179
– by hot wall epitaxy
– – of silicon carbide tips 527
– – of silicon tips 527
– – of zinc sulphur telluride 521
– by liquid phase epitaxy
– – of aluminum gallium arsenide 251
– – of indium gallium arsenide 496
– by metalorganic chemical vapor deposition
– – of aluminum gallium arsenide 242, 307
– – of gallium arsenide 190
– – of gallium indium phosphide 307
– – of gallium nitride 143, 167, 216, 435, 478, 505, 811
– – of indium arsenide 421
– – of indium gallium arsenide 463
– – of magnesium oxide 651
– – of silicon carbide 629
– by molecular beam epitaxy
– – of aluminum nitride 429
– – of gallium arsenide 212
– – of gallium indium arsenide phosphide 458
– – of gallium nitride 162, 273
– – of indium arsenide 451
– by vacuum deposition
– – of silicon 137
– theory of laser assisted doping 444

Vapor growth technique
- by chemical transport
- - of gallium indium phosphide 264
- - of silicon carbide nanorods 595
- - of ultrafine powder of aluminum nitride 487
- - of zinc selenide 187, 230
- - of zinc telluride 187
- by evaporation and condensation
- - of zinc selenide 234
- by hydride vapor phase
- - of indium phosphide 600
